## Descriptive statistics

Table S1: Descriptive Statistics by Parents' Socioeconomic Status, NEPS SC1

|  | All | Socioeconomic Status Latent Classes |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | n (\%) | Very Low ( $\mathrm{N}=221$ ) | Low ( $\mathrm{N}=553$ ) | Medium ( $\mathrm{N}=261$ ) | High ( $\mathrm{N}=857$ ) |
| Baby's gender assigned at birth |  |  |  |  |  |
| Boy | 981 (52) | 117 (53) | 293 (53) | 145 (56) | 426 (50) |
| Girl | 911 (48) | 104 (47) | 260 (47) | 116 (44) | 431 (50) |
| Birth Order |  |  |  |  |  |
| First | 631 (33) | 57 (26) | 161 (29) | 101 (39) | 312 (36) |
| Second or later | 1,261 (67) | 164 (74) | 392 (71) | 160 (61) | 545 (64) |
| Premature birth |  |  |  |  |  |
| Yes | 112 (6) | 16 (7) | 29 (5) | 13 (5) | 54 (6) |
| No | 1,780 (94) | 205 (93) | 524 (95) | 248 (95) | 803 (94) |
| Low birthweight ( $<\mathbf{2 5 0 0 g}$ ) |  |  |  |  |  |
| Yes | 108 (6) | 20 (9) | 30 (5) | 12 (5) | 46 (5) |
| No | 1,784 (94) | 201 (91) | 523 (95) | 249 (95) | 811 (95) |
| Smoke while pregnant |  |  |  |  |  |
| Yes, regularly, now and then | 194 (10) | 112 (51) | 62 (11) | 6 (2) | 14 (2) |
| No, never | 1,698 (90) | 109 (49) | 491 (89) | 255 (98) | 843 (98) |
| Drank alcohol while pregnant |  |  |  |  |  |
| Yes, regularly, now and then | 129 (7) | 10 (5) | 30 (5) | 16 (6) | 73 (9) |
| No, never | 1,763 (93) | 211 (95) | 523 (95) | 245 (94) | 784 (91) |
| Months breastfed |  |  |  |  |  |
| Not breastfed | 212 (11) | 75 (34) | 76 (14) | 15 (6) | 46 (5) |
| Btw. 1-3 months | 284 (15) | 71 (32) | 117 (21) | 25 (10) | 71 (8) |
| Btw. 4-6 months | 1,135 (60) | 61 (28) | 302 (55) | 165 (63) | 607 (71) |
| More than 6 months | 261 (14) | 14 (6) | 58 (10) | 56 (21) | 133 (16) |
| Mother's feelings of depression |  |  |  |  |  |
| Never | 670 (35) | 49 (22) | 182 (33) | 87 (33) | 352 (41) |
| Seldom | 723 (38) | 78 (35) | 211 (38) | 111 (43) | 323 (38) |
| Sometimes | 355 (19) | 61 (28) | 114 (21) | 50 (19) | 130 (15) |
| Often/always | 144 (8) | 33 (15) | 46 (8) | 13 (5) | 52 (6) |
| Mother's age |  |  |  |  |  |
| Mean (sd) | 32.46 (5.11) | 27.43 (5.81) | 31.18 (4.99) | 32.43 (4.24) | 34.59 (3.92) |
| Median | 32 | 27 | 31 | 32 | 34 |
| Family structure at birth |  |  |  |  |  |
| Two biological parent | 1,717 (91) | 122 (55) | 519 (94) | 231 (89) | 845 (99) |
| Two parents (stepfather) | 16 (1) | 5 (2) | 6 (1) | 0 (0) | 5 (1) |
| Lone mother | 159 (8) | 94 (43) | 28 (5) | 30 (11) | 7 (1) |
| Family owns house they live in |  |  |  |  |  |
| Yes | 815 (43) | 9 (4) | 238 (43) | 59 (23) | 509 (59) |
| No | 1,077 (57) | 212 (96) | 315 (57) | 202 (77) | 348 (41) |
| Residence location in Germany |  |  |  |  |  |
| East | 505 (27) | 113 (51) | 143 (26) | 123 (47) | 126 (15) |
| West | 1,387 (73) | 108 (49) | 410 (74) | 138 (53) | 731 (85) |
| Cultural capital index |  |  |  |  |  |
| Mean (sd) | 8.69 (2.98) | 7.21 (2.18) | 8.02 (2.58) | 9.64 (3.11) | 9.22 (3.13) |
| Median | 8 | 7 | 7 | 9 | 9 |
| Number of adults in household |  |  |  |  |  |
| One | 140 (7) | 83 (38) | 22 (4) | 28 (11) | 7 (1) |
| Two | 1,694 (90) | 126 (57) | 502 (91) | 230 (88) | 836 (98) |
| More than two | 58 (3) | 12 (5) | 29 (5) | 3 (1) | 14 (2) |

Table S1: Descriptive Statistics by Parents' Socioeconomic Status, NEPS SC1 (continued)

|  | All | Socioeconomic Status Latent Classes |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | n (\%) | Very Low ( $\mathrm{N}=221$ ) | Low ( $\mathrm{N}=553$ ) | Medium ( $\mathrm{N}=261$ ) | High ( $\mathrm{N}=857$ ) |
| ELFRA-2P wave 3 sum score |  |  |  |  |  |
| Mean (sd) | 147.42 (63.80) | 105.00 (66.20) | 142.25 (66.59) | 157.57 (58.01) | 158.60 (57.85) |
| Median | 158 | 99 | 153 | 167 | 166 |
| PPVT-4 wave 4 sum score |  |  |  |  |  |
| Mean (sd) | 49.11 (28.25) | 37.37 (27.09) | 46.29 (27.84) | 52.42 (28.45) | 52.94 (27.74) |
| Median | 55 | 39 | 52 | 60 | 58 |
| PPVT-4 wave 6 sum score |  |  |  |  |  |
| Mean (sd) | 83.92 (22.36) | 71.05 (21.68) | 80.54 (22.21) | 86.29 (23.00) | 88.69 (20.75) |
| Median | 84 | 72 | 80 | 85 | 89 |

## Clarifications on causal mediation analysis

The casual mediation analysis I am using in the paper is suited for the case of a single exposure ( $S E S$ ), whose total effect on an outcome $(Y)$, goes through multiple sequential mediators $\left(M^{P}, M^{I}, M^{S}\right)$. To deal with mediator-outcome confounders affected by exposure, and other confounders, I employ the g-formula approach. Following the diagram in Figure 1 in the paper, this approach relies on the estimation of a series of models: an outcome regression for the language skills of children at a given age ( $Y=f\left(S E S, M, C, C^{M}\right)$ ); various mediator regressions of parenting mechanisms $\left(M^{D}=g_{D}\left(S E S, C, C^{M}\right)\right.$ for each of the $D$ parenting dimensions ( $\mathrm{P}, \mathrm{I}$, or S ) - and more precisely each of the mediators that are being considered); and regressions for mediator-outcome confounders affected by the exposure $\left(C^{M}=w_{l}(S E S, C)\right.$ for each exposure-induced confounder $l$ affected by exposure $S E S$ ), where $f, g_{m}$ and $w_{l}$ are functions to be estimated. These functions are estimated via generalized linear models, adjusted to each type of dependent variable (i.e., linear, binary, or ordinal). After estimating these models, and based on its predictions, the g -formula is applied to obtain the counterfactual outcomes and compute the respective randomized direct and indirect effects. In the paper, I have outcomes at three time points, $Y_{1}, Y_{2}$, and $Y_{3}$, hence, for later outcomes, all the in-between mediators and exposure-induced confounders, early, middle, and late, are used to compute the counterfactual distribution. In this sense, the hypothetical intervention corresponds to a sustained intervention, not just a one point in time. Therefore, for later outcomes, the mediating mechanisms become more complex, involving early and later mediators. In the models, I include all parenting mediators that have taken place before the measurement of the outcome, and adjust for all observed potential exposure induced confounders in between, as described in Table 1 in the main paper.

## Robustness check employing mother's edudcational attainment instead of latent class approach to SES

Figure 1: Interventional/Randomized mediation effects by maternal education (ISCED) on language skills at three time points with respect to mothers with university education
